K-AKA Technology Services is a full-service website and application development company specializing in building, maintaining, and scaling high-performance digital solutions. From custom websites to robust web and mobile applications, we ensure secure, scalable, and user-friendly products. Our ongoing maintenance services keep systems updated, optimized, and running smoothly—so our clients can focus on growing their business.

Established in 2020 and based in Bengaluru, Karnataka, K-AKA Technology Services operates at the intersection of **professional software development** and **practical technical education**. We provide comprehensive Software as a Service (SaaS) solutions to businesses while simultaneously creating opportunities for students and young professionals to gain industry-relevant experience through structured internship programs and we provide full-service website and application development focused on building secure, scalable, high-performance systems.

➢ VISION AND MISSION

K-AKA Technology aims to deliver *innovative, scalable software solutions* that meet customer needs and support digital transformation for businesses and learners alike. It focuses on *blending software services with real-world training and growth opportunities* for technical professionals.

Vision:

"Our vision is to become the most trusted IT partner, creating smarter, more connected worlds by pushing the boundaries of technology."

The vision of K-AKA Technology Services can be understood as aiming to become a **reliable and trusted technology partner**, delivering scalable software solutions while contributing to skill development in the technology sector.

The company envisions supporting digital growth by combining **innovation, learning, and real-world application** of technology. This means creating interconnected software ecosystems that streamline communication and automate complexity.

Mission:
The mission of K-AKA Technology Services focuses on:

"Our mission is to create customized, high-quality solutions that address our clients' unique challenges success."

- Delivering **quality SaaS-based software solutions** so our clients have modern, cloud-based tools that grow with their business
- Supporting businesses and learners through practical and efficient technology solutions
- Customized problem solving that ensures bridging the gap between complex business challenges and intuitive software.

➢ ORGANIZATION STRUCTURE

Organizational Framework

- **Executive Leadership**: **CEO (Chief Executive Officer)**, who maintains direct oversight of all primary departments and strategic functions.
- **Operational & Support Arms**: Reporting directly to the CEO are three distinct internal departments and one externalized function:
  - **Program Managers**: Handle the high-level coordination of **project teams** and operational flow.
  - **Internship Co-ordinators**: Manage the talent pipeline, specifically overseeing the **Interns**.
  - **Accounts & Administration**: This is an **outsourced** function that maintains a communication link with the CTO for administrative alignment.
- **The Technical Pillar**: The **CTO** manages the **Technical Wing**.

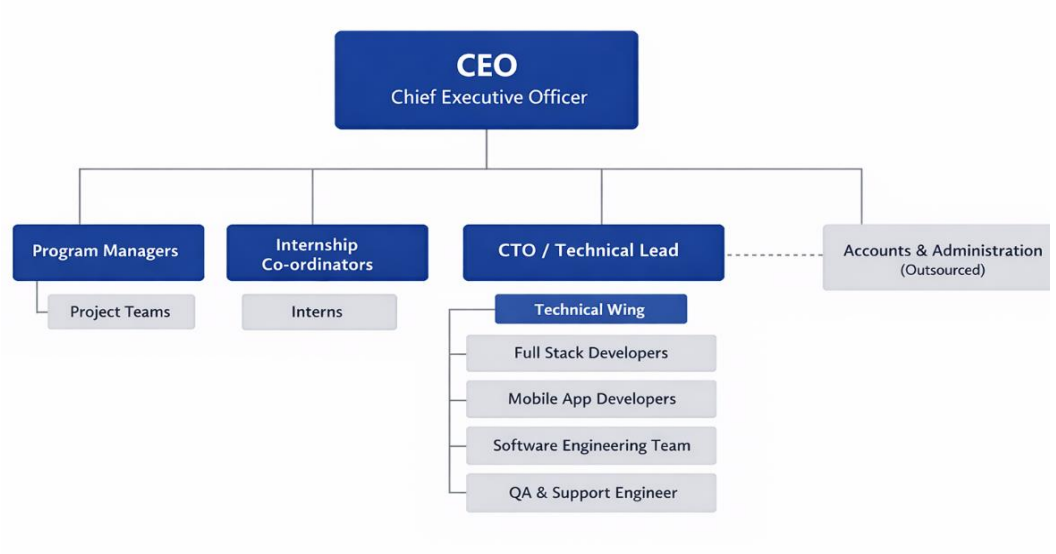

Figure 1.1: Organization Structure

The Technical Wing Composition

Managed by the CTO, this department is subdivided into specialized engineering roles:

- **Full Stack Developers**: Handling comprehensive web and system development.
- **Mobile App Developers**: Focused on platform-specific application growth.
- **Software Engineering Team**: The technical group responsible for the product's foundation.
- **QA & Support Engineer**: Ensures product quality and provides technical assistance.

➢ ROLES AND RESPONSIBILITIES OF THE PERSONNEL

1.Executive Leadership & Operations

- **Founder / CEO**: Provides overarching vision, strategic direction, and high-level decision-making.
- **CTO / Technical Lead**: Sets technological roadmap, designs system architecture, and ensures code quality, security, and scalability.
- **Program Manager**: Oversees operations, manages project lifecycles, and coordinates between leadership and execution teams.

2. Technical Strategy & Specialized Development

- **Project Team:** Collaborative units of developers and interns tasked with building modules and meeting project deadlines.
- **Technical Team (Software Engineers):** Focus on core product development, maintaining SaaS infrastructure, and delivering technical service solutions.
- **Full Stack Developers:** Versatile engineers who handle both front-end user interfaces and back-end logic to build cohesive web applications.
- **Mobile App Developers:** Specialized team members dedicated to creating, testing, and optimizing applications for iOS and Android platforms.
- **QA & Support Engineer**: Performs testing, defect tracking, technical support, and ongoing system maintenance.

3. Business Development & Operations

- **Sales / Business Development**: Lead generation, client proposals, partnership development, and client communication.
- **Accounts & Administration (Outsourced)**: Handles billing, payroll, compliance, and financial reporting.

4. Education and Training Division

- **Project Interns:** Junior contributors who work directly under the guidance of engineers and coordinators, gaining hands-on experience by supporting real-time development cycles.
- **Internship Coordinators**: Manage intake, onboarding, and day-to-day guidance of project interns.

➢ DEVELOPMENT PROCESS

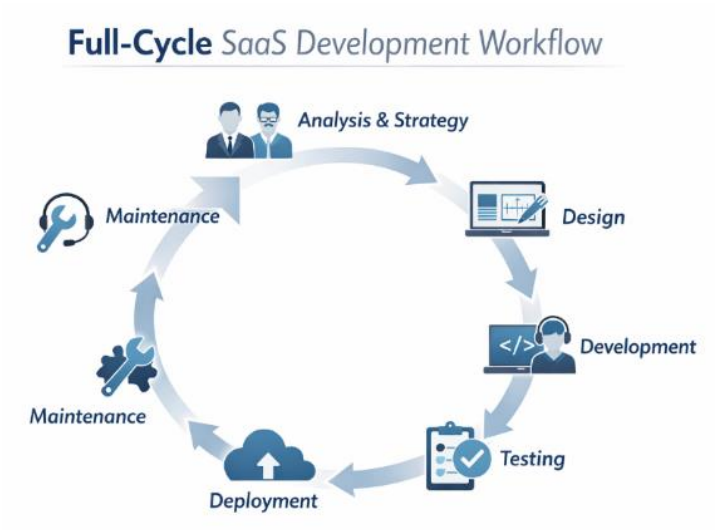

Figure 1.2: SAAS Development Process

1. Analysis & Strategic Planning

- **Founder/CEO:** Defines vision and strategic direction.

Market Performance

Key Performance Highlights

- Successful delivery of multiple web and mobile application projects
- Strong client retention through continuous maintenance and support
- Expansion from basic website development to full-cycle application solutions
- Reputation for reliability and timely project delivery

Market Presence

- Serves start-ups, small and medium businesses, and enterprises
- Supports local, national, and remote clients
- Expertise in web applications, mobile applications, and software maintenance

Competitive Position

- Agile development team enabling quick turnaround
- Use of modern technologies for secure and scalable solutions
- Focus on personalized client engagement

Growth Trend and Future Outlook

- Growth in recurring maintenance and support contracts
- Increasing client acquisition through referrals and digital presence
- Planned expansion into cloud-based solutions and SaaS platforms

CONCLUSION

In conclusion, K-AKA Technology Services is a developing technology-based organization that focuses on delivering software solutions along with practical training opportunities. The company follows a structured approach in terms of organizational hierarchy, defined roles and responsibilities, emphasis on web and mobile application development and a systematic development process.

Overall, the study of this company profile provides a clear understanding of how a real world IT organization operates, including its workflow, team structure and service model.
